Grading Policy
Programming Assignment 1

There have been 10 test cases each having 10 marks. Test cases 5, 7, 8, 9, and 10 have been selected from the given sample input samples and the other cases are new.

The following table shows the penalty of different faults types:

	Scanner Fault Type	Penalty
1	Compile error for a test case	-10
2	Not detecting a lexical error (False Negative)	-2
3	False detection of a lexical error (False Positive)	-2
4	Wrong content for an error message	-1
5	Missing a correct token	-1
6	Detecting a wrong token	-1
7	Any mistake in the line number of tokens or errors messages	-1
8	Missing keyword or identifier in the symbol table (Max -2 for a test)	-1
9	Additional keyword or identifier in the symbol table (Max -2 for a test)	-1
10	Empty symbol table! (Max -10 for all tests)	-2
